

# Always Wear Personal Protective Equipment!

**1.** Remove injured employee, treat wound and notify a supervisor.

**2.** Isolate and block off the contaminated area.

**3.** Put on protective equipment: gloves, mask and *safety glasses* should be worn for risk of splashing.

**4.** Wipe up blood with paper towels and throw the dirty paper towels in a biohazard bag.

**5.** Apply bleach solution to area and let it sit for 20 minutes.

**6.** Wipe the bleach solution with disposable towels and throw dirty towels in a biohazard bag.

**7.** Remove disposable protective equipment and place them in a biohazard bag.

❖ Remember to wash your hands after you throw away the sealed biohazard bag.
